

Two equals one plus one.

Two equals 1 + 1.

Two equals

1 + 1.

2 = 1 + 1.

The equilibrium quantity Q^* occurs where the supply and demand curves cross.

At the equilibrium quantity Q^* ,

$$MC(Q^*) = MB(Q^*).$$

$V = \{\text{attack, retreat, surrender}\}$.

$A = \{n : n \text{ is an even number and } n < 100\}$.

$$\{1, 2, 3\} = \{3, 2, 1\}.$$

singleton: $\{\text{Christmas pudding}\} \neq \text{Christmas pudding}$.

tuple when the order matters

$$(1, 2, 3) \neq (3, 2, 1).$$

(Christmas pudding, £5).

2 items - "pair"

3 items - "triple"

n items - " n -tuple"

If a is an element of the set A , we write $a \in A$. If not, we write $a \notin A$.

Special sets:

* the empty set $\emptyset = \{\}$.

* whole numbers, also called natural numbers, $\mathbb{N} = \{0, 1, 2, 3, \dots\}$.

* integers, $\mathbb{Z} = \{\dots, -1, 0, 1, 2, \dots\}$ from "Zahlen" in German.

* rational numbers, $\mathbb{Q} = \left\{ \frac{p}{q} : p \in \mathbb{Z}, q \in \mathbb{N}, q \neq 0 \right\}$.

+ real numbers, \mathbb{R} , includes $\sqrt{2}$, π .

* non-negative real numbers \mathbb{R}_+

$$= \{x \in \mathbb{R} : x \geq 0\}. \quad \mathbb{R}_{++} = \{x \in \mathbb{R} : x > 0\}.$$

* intervals: $[a, b] = \{x \in \mathbb{R} : a \leq x \leq b\}$

$$[a, b) = \{ \dots \mid a \leq x < b \}.$$

Subsets: $A \subseteq B$

$A = B$ if $A \subseteq B$ and $B \subseteq A$.

Cartesian products: $\{1, 2\} \times \{a, b\}$

$$= \{(1, a), (1, b), (2, a), (2, b)\}.$$

"the" definitions:

- might not exist, eg: $\sqrt{-1}$.
- might not be unique, eg: $\sqrt{4} = 2$?
- otherwise, "well-defined". eg Let $x = 1+1$.

Functions $f: A \rightarrow \mathbb{R}$

domain \nearrow

co-domain

For example $f(x) = x^2$ is a function

$$f: \mathbb{R} \rightarrow \mathbb{R}.$$

$$\text{Range}(f) = \{f(a) : a \in A\}.$$
